

Unified Zero Trust Access and Protection for Cloud

Simplify access, manage privileges, and enforce zero trust policies to protect every app and workload across private and public clouds from a single console.

The Challenge

Managing access and protecting apps and workloads across public and private cloud deployments introduces new challenges. Many organizations face ballooning access management challenges such as the use of high-risk VPNs, shared service accounts, and the inability to enforce consistent policies across multi-cloud environments.

The Xage Solution

Xage combines the capabilities of ZTNA, PAM, and Microsegmentation to deliver zero trust access and protection while eliminating the risks of VPNs and avoiding the complexity of separate ZTNA, PAM, and Microsegmentation security controls.

Xage Benefits in the Cloud

PROTECT EVERY APP AND
WORKLOAD FROM ATTACKS

Enforce MFA, SSO, and zero trust access policies on all apps, workloads, and data across every cloud instance and provider.

SIMPLIFY MANAGEMENT AND STREAMLINE ACCESS

Manage identities, credentials, and privileges in a single console. Reduce complexity to minimize attack surface and risk.

PREVENT DATA BREACHES Prevent unauthorized access and movement of data into, out of, and across cloud resources. Stop attacks

and prevent human error.

Xage Capabilities

Combined ZTNA and PAM

To achieve secure access across multiple IdPs, CSPs, workloads, apps, and sites, while reducing complexity for admins and end users.

Centrally manage identities, credentials, and policies

To eliminate the risk of shared service accounts, stale credentials, and misconfiguration.

Distributed password vault

Eliminates risk of credentials being stolen, tampered with, or encrypted by ransomware.

Prevent ransomware with microsegmentation

Across Virtual Private Cloud apps and workloads, datacenter, and every workload and application.

How It Works

The Xage Fabric Platform is a highly available, resilient cybersecurity mesh that can be deployed in a day without any disruption of existing systems. Xage delivers complete control of identities and access policies across your entire enterprise in a single, simple solution.
